

Summary: Incipient Recombinant Inbred strain from the Collaborative Cross population. This strain is derived from 8 inbred founders: A/J, C57BL/6J, 129S1/SvImJ, NOD/ShiLtJ, NZO/HILtJ, CAST/EiJ, PWK/PhJ, and WSB/EiJ. The genome of this strain is not fully replicable because 9.2% is segregating for the founder strains. Note that MiniMUGA may fail to detect additional small regions of residual heterozygosity. This MMRRC Strain GQC report is based on MiniMUGA (PMCID: PMC11457065) data (Samples Genotyped and Genotyping Dates)

Genetic Background	Zygoty	Genome %	Estimated # Segregating SNPs
CC084/TauJUnc (fixed)	Homozygous	90.8%	N/A
CC084/TauJUnc (segregating)	Heterozygous	9.2%	N/A
Total		100.0%	0
